Mines and Mining Stocks

GIROUX MINES TO BE READY TO SHIP

Tonnage Required by Tooele Smelter.

With the Giroux railroad to the Giof the permanent hoisting plant and by the permanent hoisting plant and by buildings for housing the permanent hoisting plant and by the buildings for housing the permanent engines and boilers is being the permanent hoisting plant of the boiler and engine houses is under way, and the structural steel for the nammeth gallows frame has arrived. Dre bins are being built. Cutting of the station for the pumping plant on the 1,200-foot level is going ahead unler rush orders, but it will be two or three months before the pumps can be astailed and placed in operation.

In the meantime it is likely that the thinfit will be continued downward. The prosseut to the Alpha workings will be undertaken until the pumps thall have been installed, on account of the two was considerable skir. On the curb was considerable skir mishing for Nevada Hills stock, of mishing of preparations for inaugurating in the early fall the shipping of a large tonnage of ore to the International smelter at Toole. The initial apacity of the smelter is to be about 1,000 tons daily. It is doubtful if Utah Consolidated will at first be in positions. The latital papacity of the smelter is to be about 1,000 tons daily. It is doubtful if Utah Consolidated of Stares sold, 29,675.

Walls.

Giroux's activities all point to the naking of preparations for inaugurating in the early fall the shipping of a gree tonnage of ore to the International smelter at Tooèle. The initial papacity of the smelter is to be about 1,000 tons daily. It is doubtful if Utah Consolidated will at first be in position to supply in excess of 1,000 tons faily, its contract calling for the maximum of 1,200 tons.

No source of supply of copper ore to

mum of 1,200 tons.

No source of supply of copper ore to enable the smelter to be run at capacity is at this time in sight in the Utah field—ahead of the completing of a railroad to the Deep Creek country—so that there is no doubt, considering the close relations of Giroux and International Smelting owners, that the Giroux mines will be drawn upon for

BONNIE CLARE TO BUILD RAILROAD

Old Gold Mountain District Is Given Impetus by New Projects.

Nineteen miles of railroad steel, which was purchased by the Bonnie Clare Mining company from the Clare Mining company from the Needles smelter, is being torn up to be used for constructing a new line of railroad from Bonnie Clare station to the company's mines in the old Gold Mountain district, near the California line, in southern Nevada. The rails and rolling stock are to be shipped to Bonnie Clare within the next two weeks, and active construction work will then be commenced.

Newhouse ... 2.00 ... 2.00 arging the Bonnie Clare company's mill to 100 tons daily capacity is nearly completed. It is to be in operation by July 1, with thoroughly modern

ethods of ore reduction. With a railroad and a large mill, the with a rainroad and a large mill, the Gold Mountain district is expected to take its place among the important producing camps of southern Nevada. Some of its mines in the old daysmore than a third of a century agoproduced ore which was shipped overland 250 miles at a profit; modern facilities for headling and treating the cilities for handling and treating the ores are expected to result in the bringing in of several steady produc-

Development work is being pushed in a number of properties in the district with excellent results, it is said. Large quantities of milling and smelting ore have been opened in the Cour-bet mine of the Bonnie Clare company, and, with the tonnages that are being developed in other mines, it is believed that there will be no difficulty in obtaining a sufficient supply of ore to taining a sufficient supply of ore to tain the keep the mill running at capacity.

SEND STANDARD SHAFT AFTER SOURCE OF GAS

While there is yet considerable trouble with gas in the Tintic Standard shaft, sinking is again being prosecuted with nearly normal progress. The bottom of the shaft was yesterday eight feet below the 800-foot level, with no marked change of formation since sinking was resumed. That the gases must come through fissures leading from an important deposit of sulphiles is the only explanation of the phenomenon which experts are enabled to offer. Disappointment would result should the next 100 feet of sinking fail to bring an interesting change. That change should be, of course, the encountering of the zone of enrichment of the massive bodies of leached ore which have been opened in the upper levels

GOLD STRIKE CAUSES RUSH. Excitement prevails at Eureka, Nev. over a strike of gold-silver ore re-ported to have been made near the Regli milk ranch, eight miles northeast of Eureka. The strike is in what is described as a big quartz dike. Fully 45 men left Eureka in two days for the scene of the find. The entire surrounding country has been located, it

Pioneer camp, in southern Nevada,

W. E. L. Dillaway says:

"Preliminary work has been extensive; enlarging and straightening that portion of the tunnel already constructed so that it should have uniform dimensions of 8x10 feet. The tunnel enlarged will accommodate a double track of 24-inch gauge and 35-pound rail, which is laid its whole length, affording ample capacity for transportation of all the ore. As soon as the tunnel is completed through to Bingham the ore of other companies may W. E. L. Dillaway says: ham the ore of other companies may be taken on. This will depend on what may be the requirements for this com-

pany.
"The water supply has been enlarged by laying a pipe line to the springs in the Upper Middle canyon, which gives the company sufficient electric power from the water supply on its own premises for all its requirements. "The new buildings constructed in-clude an addition to the power house Trans Blossom. 500 at 93c.

Power Plant in Units. "To complete the electric installa-tion new poles have been erected and wires strung to the mouth of the tunnel. The power plant has been arranged in units so that each machine is driven by its own Peffon wheel, making the plant economical in operation and insuring against a complete shutdown in case of stopping of any one unit.

East Tintic Development, 500 at 2c. Iron Blossom, 200 at 93c; 700 at 92c. Iron King, 300 at 12½c. Nevada Hills, 100 at 83c. Ohio Copper, 300 at \$2.50; 300 at "A new blacksmith shop has been erected at the mouth of the tunnel with a complete equipment. A new living house has been erected having eighteen sleeping rooms, accommodating forty men, with library, lounging rooms, bathrooms, and all modern conveniences for comfort.

"Additions have been made to the company's office and to the boarding house; and several cottages have been

house; and several cottages have been erected for married men and their fam-This completes all preliminary work and gives the company a model plant capable of being more economically conducted than usual, because of the ability to produce its own power from its own water supply.
"The plant is paid for and the company's bills are settled to May 1."

TOOELE SMELTER WILL Bingham Copper made another advance of 1 cent a share, with 5,100 shares gathered in at 15c to 16c. Opex

BE READY AUGUST 1 Management of the International Smelting company expects to have the first furnace of the Tooele plant ready first furnace of the Tooele plant ready for blowing in by August 1. Such was the statement yesterday by C. H. Repath, superintendent of construction, when asked as to the correctness of the statement of an eastern financial journal which named October 1 as the earliest probable date of opening.

"August 1 is the date we are aiming for," said Mr. Repath. "Unforeseen delays may be met, of course, but it looks now as though the plant would be ready to go into operation close to the date set. We had some difficulty securing all of the structural steel workers needed, but the force is complete now and good progress is being made. The entire force employed numbers 460 men. shares of West Quincy brought 12c. There was a curb sale of Utah Sugar at \$8.45. Closing quotations: Twelve carloads of ore, all from Utah mines, were released yesterday by the Utah Ore Sampling company.

"We shall begin taking ore some time in July. The Utah Consolidated company is already trying out its new tramway from the mine to the smelter and it looks as though it would be ready, perhaps early in July, to begin filling the bins."

COPPER SHARE MARKETS COLORADO ORE IN

Raise From 500 Level Shows Three Feet of Silver-Lead Product.

In the raise which is being driven from the 500-foot level of the Carisa mine, southwest of the shaft, is a body of three feet of high-grade silver-lead ore, the ore being identical in appearance with the high-grade ore in the

famous Colorado-Sioux vein.

Except for occasional copper stains, the ere is a strictly silver-lead product—the first of the kind which has been encountered in a considerable body in Carisa ground.

Carisa ground.

A streak of the new ore was encountered on the 500-foot level. Followed by the raise about twenty feet, it has steadily become larger and stronger, until when Manager Grant Snyder visited the mine yesterday there were three feet of solid creak three were three feet of solid ore showing the crystallized lead and galena characteristics of the finest Colorado pro-duct.

The fissure in which the strike has been made is five and six feet wide. It is directly in line with the fissure which has been opened in the large cave, some distance toward the northeast. The cave fissure is being pros-pected at this time, and it shows encouraging indications of carrying ore bodies. The cave appears to have been formed by the spreading of the walls of the fissure. It forms conditions most attractive for exploratory work. The Carisa management is not, for publication, at least, drawing inferences from the interesting situation presented in the 500-foot level of the mine. No prediction concerning the outcome of further development is being made; it merely announces that it will go ahead developing what is in sight and permit the future to take care of itself. Field for Speculation.

But it would appear to be an ex-

cellent opportunity for drawing in-ferences. The meaning of that large fissure, carrying Colorado ore and leading out into Carisa ground from the direction of the Colorado vein, is something which is likely to give rise to no end of interested speculation. Had such a strike been made, for example, when Iron Blossom interest was at its height, a distinct sensation would have resulted.

One of the questions which must arise is: Will the new discovery at least partially confirm the original theory of Col. C. E. Loose, that the Colorado vein would be deflected from Iron Blossom into Carisa ground?

Is it possible that a feeder of that wonderful vein has been found-probably to result in the solving of the mystery of its origin, in discovery of the source of the ore bodies—at depth—and in bringing in much productive ground in territory adjacent to that which contains the original great ore

The field for speculation is virtually unlimited, in fact; the development of Carisa's new ore body will be watched with greater interest than has any-thing which has taken place in Tintic district in a long time.

FLORENCE GOLDFIELD OUTPUT. For the first quarter of the current ear the net profits of the Florence-Goldfield company were \$11,779.77. The company has filed with the bullion tax collector of Nevada the statement required by law, setting forth that the total ore mined during the quarter was 162.92. The cost of extraction amounted to \$71,016.66; smelting and sampling, \$14,524.91; reduction, \$39,844.58. The company paid a tax of \$347.41 on the

MINING NOTES. A pump, an engine and other ma-chinery have been sent by the Utah-Wyoming Oil company to its Wyoming oil property, to be installed at its No. well, which has been capped since the oil was encountered. The well, it is said, demonstrated capacity of 140 barrels of oil a day. The company intends to get in position to market the

Leasers upon the south workings of the Carisa mine, in Tintic district, are sending out several shipments of good copper ore.

W. B. Farmer, president of the Utah Metal Mining company, is due to ar-rive in this city from Boston, accom-panied by several other prominent capitalists.

San Francisco stock exchanges, on count of Decoration day, will be account of Decoration day, will closed both Saturday and Monday. W. E. Hubbard has returned from a

William E. White, county attorney of Piute county, is in the city to close with eastern capitalists deals for bonds and leases upon promising mining properties in Marysvale district. Mr. White reports a great deal of new activity in the district, especially in the Bullion canyon section. The Shamrock, owned by Salt Lakers, and the Cascade which is owned by eastern capitalists, are among the properties which are being developed into producers of high-grade ore. Leasers on the Monroe property are likewise taking out ship-
